

THE GALLERY COLLECTION

Combination fireplace that's 'ideal for wood burning'

The Gallery Collection's black cast-iron Pembroke combination, with large burning area, is ideal for open coal or wood-burning fires. The extra-deep, cast-iron back ensures that the Pembroke creates an excellent heat output which the cast iron then radiates in to the room. Not only does the deep cast back mean that you get a longer burning time; it also ensures you can burn larger logs – normally not possible with standard open fires.

The Pembroke is available in black (as shown) or fully polished. The optional black granite hearth (also shown) sets off the black Pembroke to perfection. The Pembroke is also available with a realistic, gas flame-effect fire or with an electric flame effect where little or no heat is required.

Information on this and the rest of the comprehensive Gallery Collection is available from the distributors shown below or from the Gallery Collection web site www.galleryfireplaces.co.uk.
